

Activities Manual for Electric Motors and Control Systems

This manual contains quizzes, practical assignments, and computer-generated simulated circuit analysis assignments. Quizzes made up of multiple choice, true/false, and completion-type questions are provided for each part of each chapter. These serve as an excellent review of the material presented. Practical assignments are designed to give the student an opportunity to apply the information covered in the text in a hands-on motor installation. The Constructor motor control simulation software is included as part of the manual. This special edition of the program contains some 45 preconstructed simulated motor control circuits constructed using both NEMA and IEC symbols. The Constructor analysis assignments provide students with the opportunity to test and troubleshoot the motor control circuits discussed in the text. The Constructor simulation engine visually displays power flow to each component and using animation and sound effects, each component and using animation and sound effects, each component will react accordingly once power is supplied.
