

Instructors solutions supplement to accompany Probability and statistics for engineers and scientists

This supplement contains detailed solutions to every exercise in the text. Most of the multiple linear regression and analysis-of-variance problems were solved using the computer software package SAS. One could just as well use other packages, or simply write your own programme. Copies of programmes in both BASIC and PASCAL that can be used in the absence of the more popular commercial software packages may be found in the appendix of the Students Solutions Manual.
