

Statistics for Engineering and the Sciences, Sixth Edition Student Solutions Manual

This book reviews a variety of experiments devoted to the investigation of charge transport in proteins and presents a unified theoretical model to interpret macroscopic results in terms of the amino-acid backbone structure of a single protein. It explores the development of new molecular devices based on proteins, such as nanometric biological sensors of new generation. It also surveys the existing data and presents the basis for future development of a new branch of nano-electronics.
