

# A Textbook of Radiology and Imaging

This book aims to provide a complete and comprehensive postgraduate textbook for all radiological trainees taking professional examinations around the world. This edition has increased emphasis on the newer imaging modalities and integrates all new imaging modalities with the organ / system chapters. It also contains over 1200 new half-tones. It should also be useful to practising radiologists and radiological departments as it offers a clinically orientated account of the state-of-the-art in radiology.
